the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations 1999).

There are a number of reasons why the world population is ageing. The first is that the number of people who are born is falling. The number of children born in the world in 1990 was 1.5 billion, but in 1998 it was 1.2 billion (United Nations 1999). The second reason is that the number of people who are dying is falling. The number of people who died in the world in 1990 was 5.5 billion, but in 1998 it was 4.5 billion (United Nations 1999).

The third reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The fourth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The fifth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The sixth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The seventh reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The eighth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The ninth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The tenth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The eleventh reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The twelfth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The thirteenth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The fourteenth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).

The fifteenth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999). The sixteenth reason is that the number of people who are living longer is increasing. The number of people who are aged 65 and over in the world in 1990 was 0.2 billion, but in 1998 it was 0.5 billion (United Nations 1999).
